

The increase in employee mobility and exploding number of daily communications characterizes today's typical business environment. Many companies are looking to unified messaging to meet such growing demands. Active Voice's Kinesis* unified communications system, through its true unified messaging, offers an ideal solution for addressing the changing communication requirements of your organization, today and tomorrow.

True Unified Messaging

Kinesis is a Microsoft® Windows® server-based solution designed for organizations requiring unified messaging within a Microsoft Exchange® environment. It harnesses the power, reliability and scalability of Exchange and Windows to provide simplified administration, a single directory service and a single message store. Kinesis offers a truly unified architecture that minimizes the learning curve and maximizes the efficiency of your IT professionals.

Powerful Features

Kinesis allows you to check messages and administer your mailbox settings over the telephone. With the Kinesis Web Assistant -- a dynamic, personal web browser interface -- you can customize your personal mailbox options quickly and efficiently from your PC. With Text-to-Speech, you can check e-mail messages and meeting requests quickly over the phone.

Real Business Benefits

Whether you work from your office or from the road, you'll benefit from quick access to, and immediate notification of, messages delivered to one place. Kinesis allows you to access

voice, fax** and e-mail messages from your Microsoft Outlook® inbox, where you can manage the information from a PC, telephone or the Internet. You can listen and reply to your e-mail over the telephone using the latest Text-to-Speech technology, check voice messages from the Internet, or forward faxes to wherever you may be. You can also visually scan and prioritize incoming messages from your desk or laptop PC, ensuring your most critical deadlines are met. With Kinesis, the ultimate benefit is that all of your messages are consolidated into one place, giving you the power to access, manage and reply to them from virtually anywhere.

Flexible Architecture

The modular design of Kinesis allows for a high level of reliability and scalability. By clustering Kinesis servers, your business can handle hundreds of callers simultaneously. The Exchange message store servers can also be clustered to ensure messages are always available.

Poised for the Future

Kinesis is designed for the future. Because it works with both traditional telephone systems and Internet Protocol (IP) solutions, Kinesis protects your existing investment and prepares your business for a smooth transition into the converged environments of the future. Development initiatives for voice and data convergence position Kinesis for tomorrow's expanding unified communications possibilities.
